

High Pressure Dryer HLP-MSD 0055 to 0870, PN 100 to PN 400

High pressure adsorption dryer, heatless regenerating, pre-, and afterfilter included.

Compressed air is lead through the inlet of the dryer (J) and across the prefilter (3). At this stage, the air is cleaned from particles and condensate.

The condensate is removed via a manually operated drain (5) or optional via a automatic condensate drain (16).

Via a 4/2-way ball valve (KH1), the air is lead into the adsorption vessel (1), in which the air is dried down to the required pressure dewpoint.

Via a non-return valve (7), the air is let into an afterfilter (4), in which possibly released particles from the desiccant are retained.

Via the outlet (O), the clean and dry air is lead into the compressed air network and to the point of use.

While one vessel is in the drying phase (adsorption), the other vessel is being dried again (regeneration).

Regeneration of the moisture-laden desiccant is achieved with a partial flow of the dried medium.

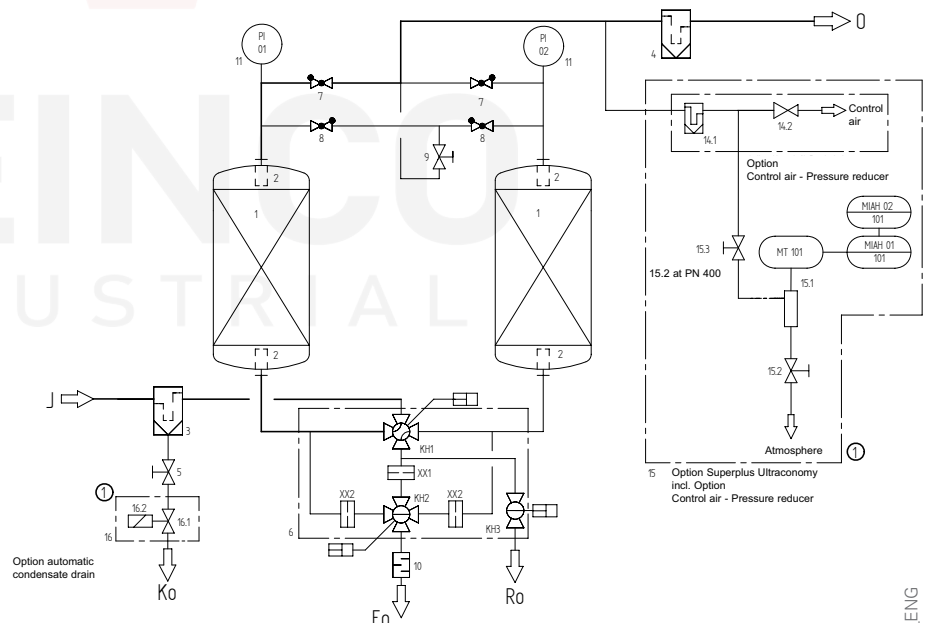

At the start of regeneration, the 4-way ball valve (KH2) is switched to the position "depressurizing".

In this way the adsorber is brought down to atmospheric pressure. The compressed air passes out of the system through the silencer (10). In the 2nd step the 2-way ball valve is opened.

A partial flow of the dried medium flows through a bypass in the upper piping and through the regenerating adsorber out to the atmosphere across a silencer (10).

High pressure adsorption dryer

HLP PN 100 - PN 400

Features HLP PN 100 - 400	Benefits
Complete purification package including pre-, afterfilter and hand operated drain (optional automatic condensate drain)	Turnkey-system; all components from one hand, technically perfectly matched to each other
Optimally dimensioned filters	Safe separation of particle and aerosols (on adherence to the specified parameters), large filter surface causes low differential pressure of the unit, thereby low operating cost
Indication of operating status (adsorption, regeneration, pressurizing, service, alarm) via LED display	High operating safety, all operating status can be easily detected at any time
Intermittend operation as standard	Coupling with the compressor with central applications possible, thus savings of regeneration air and operating cost
Use of pneumatically controlled seat valves	High operating safety, low pressure losses, low operating and maintenance costs
option package available	Flexibility in application; option package for economic and safe system integration in the compressed air network <ul style="list-style-type: none"> - dew point-dependent capacity control - automatic condensate drain - control air supply - starting valve

Product description:
Complete purification package with heatless adsorption dryer which works on the basis of pressure swing adsorption. Inclusive pre-, afterfilter, optional automatic condensate drain.

Medium:
Compressed air/ nitrogen

Pressure dewpoint:
- 40°C at 100% load

Operating pressure:
PN 100: min. 41 bar (ü), max. 100 bar (ü) PN 250: min. 101 bar (ü), max. 250 bar (ü) PN 400: min. 251 bar (ü), max. 400 bar (ü)

Medium temperature:
min. 5°C, max. 55°C.

Ambient temperature:
min. 4°C, max. 50°C.

Power supply:
230 V/ 50-60Hz optional 115 V/ 50-60Hz 24 V DC

Power consumption:
approx. 40 W

Design, manufacture, testing
Adsorber and filter: acc. to 2014/68/EU

Declaration of conformity:
acc. to 2014/68/EU

HLP PN 100 - PN 400

Sizing PN 100:

HLP	Inlet temperature	Operating pressure (bar)											
		45	50	55	60	65	70	75	80	85	90	95	100
PN 100	30°C	0,48	0,53	0,58	0,63	0,69	0,74	0,79	0,84	0,89	0,95	1,00	1,05
	35°C	0,46	0,50	0,55	0,60	0,65	0,70	0,75	0,80	0,85	0,90	0,95	1,00
	40°C	0,36	0,39	0,43	0,47	0,51	0,55	0,59	0,63	0,66	0,70	0,74	0,78
	45°C	0,28	0,31	0,34	0,37	0,40	0,43	0,46	0,49	0,52	0,55	0,58	0,61
	50°C	0,22	0,24	0,27	0,29	0,31	0,34	0,36	0,38	0,41	0,43	0,46	0,48
	55°C	0,17	0,19	0,21	0,23	0,25	0,27	0,29	0,30	0,32	0,34	0,36	0,38

Example:

$$\dot{V}_{nom} = 65 \text{ m}^3/\text{h}$$

Inlet temperature = 40°C

Operating pressure = 85 bar (ü)

Pressure dewpoint = -40°C

$$\dot{V}_{corr} = \frac{\dot{V}_{nom}}{f} = \frac{65 \text{ m}^3/\text{h}}{0,66} = 98,5 \text{ m}^3/\text{h}$$

Selected adsorption dryer: HLP 0110 - PN100

Sizing PN 250:

HLP	Inlet temperature	Operating pressure (bar)														
		110	120	130	140	150	160	170	180	190	200	210	220	230	240	250
